

A CALM COMPANION FOR MESSAGES

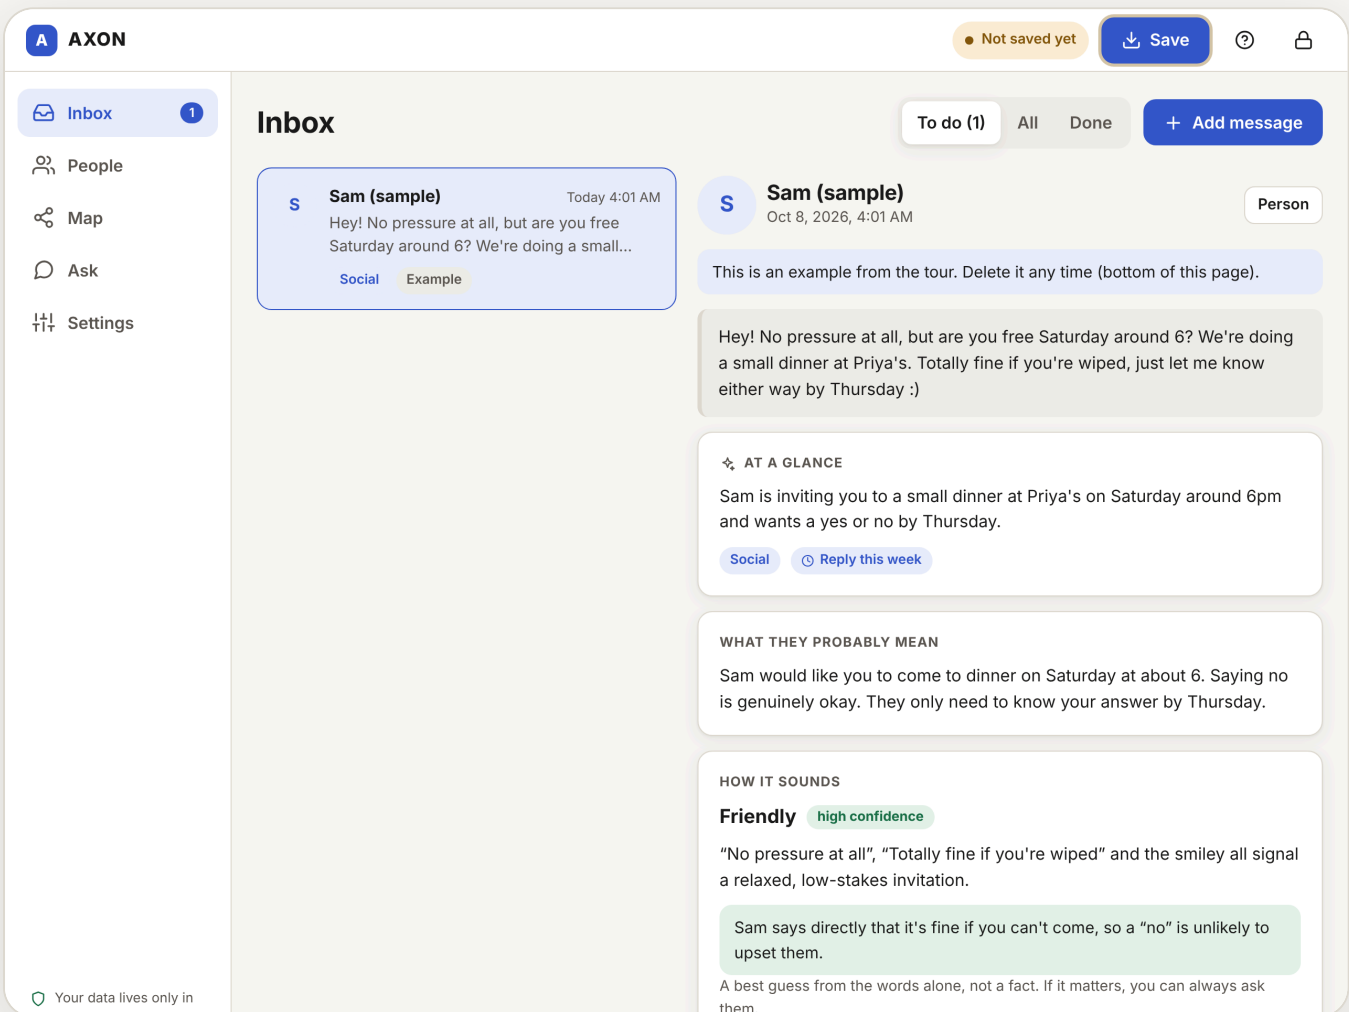

Messages, made manageable.

AXON explains the tone of a message, offers calm ways to reply, and remembers the people in your life. All of it lives in one private file that only you hold.

✓ No account

✓ Nothing stored on a server

✓ Works with any AI

Made for neurodivergent people, people with social anxiety or the broader autism phenotype, and anyone who overthinks a reply.

Four steps. About a minute.

1 Make your vault

Choose a passphrase. A few random words work well, like `maple orbit quiet bicycle`. Your vault is a single encrypted file. Nobody can read it without that passphrase, not even us.

2 Add a message

Paste one in, or import a WhatsApp chat export. People are added for you automatically and grouped as Work or Personal.

3 Make sense of it

Get a short summary, what they probably mean in plain words, how it sounds (with an honest confidence level), what they're asking, and three reply ideas written as you.

4 Save your vault

Press Save and your updated vault downloads as a file. Next time, open that file and carry on, exactly where you left off.

Your vault, explained

Files are named like `axon-vault_r12_2026-10-07_1430.axon`. The **r12** is the revision, which goes up by one every time you save, and the rest is the date and time. Always open the highest number.

Keep your vault safe

- **Save often.** The bar at the top says "Unsaved changes" until you do, and your browser warns you before you leave.
- **Keep two copies.** One in your cloud drive or on a USB stick, and an older revision as a backup.
- **Use a phrase, not a word.** Four random words are easier to remember and stronger than a short password.
- **On a shared computer,** choose "Close vault" when you're done. It clears everything from memory.

Understand first. Reply when you're ready.

Plain meaning

Hints, idioms and sarcasm are restated as exactly what's meant, in simple words.

Tone, with honesty

AXON points at the exact words behind its read and says how sure it is. Low confidence means a coin flip. It never pretends to know what someone feels for certain.

Three reply ideas

Warm

Short and simple

Kind "not right now"

Written as you. Edit one, then copy it into your chat app.

People, remembered

Notes on how you know them, their history with you, what's still waiting for a reply, and a short "story so far".

What helps with each person

Record your own accommodations, like

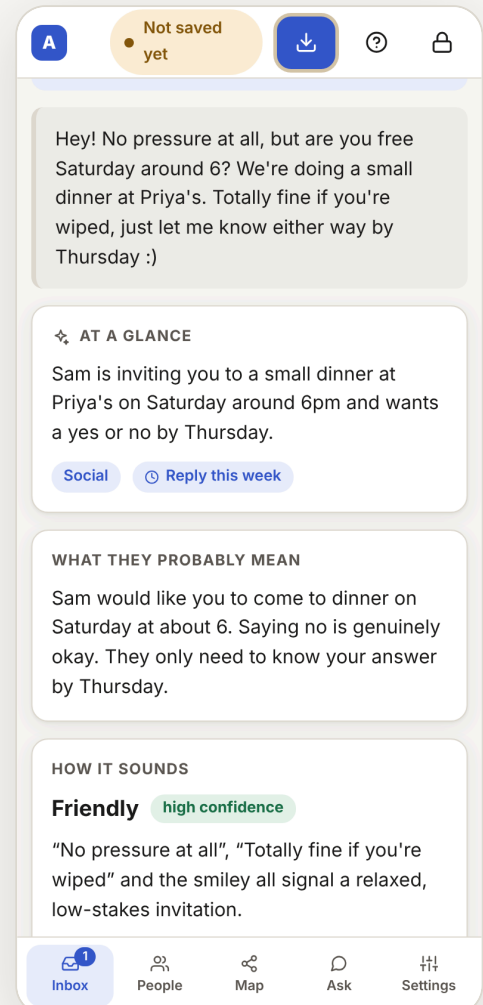

needs time to reply

prefers text to calls

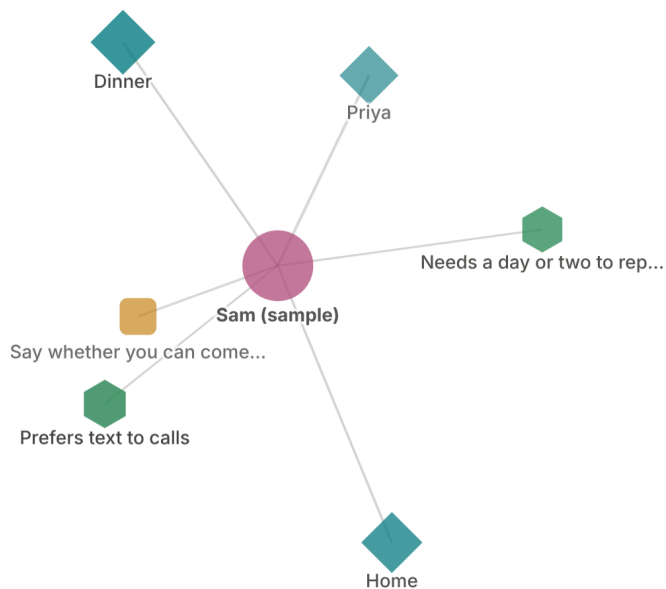

and AXON shapes its reply ideas around them. They appear on your map too.

Ask your own memory

"What's the story with Sam?" "Who am I waiting to reply to?" AXON looks it up in your vault and shows how it found the answer. Plain keyword search needs no AI at all.

Your people, connected. Even offline.

How to read the map

Everything is drawn from your own messages and notes, on your device. Select a shape to see what it connects to.

- Person (work)
- Person (personal)
- ◆ Topic you keep coming back to
- Waiting on you
- What helps

Drag to rotate · scroll or pinch to zoom · tap a shape for details

Shapes, not just colours

People, topics, things waiting on you and what helps each have their own shape, so colour is never the only clue.

3D, Flat or List

Drag to rotate, or choose a calmer flat view or a plain text list. Nothing spins unless you ask.

Built on your device

Worked out locally from your own messages. No AI is needed to draw it.

Install it. Use it offline.

- Press **Install app** (or Share → Add to Home Screen on iPhone).
- Once loaded, AXON opens with **no internet**: open your vault, then read, search and explore your map.
- AI features pause politely until you're back online.
- Optional: keep an **encrypted copy on this device** and continue without choosing a file.

Comfort settings, your way

Say it literally

Explain tone and sarcasm

Name the feelings

Keep it short

Gentle wording

Light, dark, or large text

Start from a preset for autism, ADHD or social anxiety, then change anything. These are comfort settings, not diagnoses.

PRIVATE BY DESIGN

- **No account, no database, no tracking.** Nothing about you is stored on a server.
- **Encrypted on your device** (AES-256) before you ever save.
- **The AI only sees what you send it:** the message you ask about, plus a little context. Never your whole vault.
- **You hold the only copy.** Keep it in your cloud drive, on a USB stick, or both. An optional encrypted copy on this device is off unless you turn it on.

BRING ANY AI

Groq

OpenAI

Claude

Gemini

OpenRouter

Ollama

LM Studio

Any OpenAI-compatible

Your message goes straight from your browser to your provider. Run a model on your own computer and nothing leaves it at all.

Just want to look around? "Try it free" uses a shared connection, if the site has switched it on.

QUICK ANSWERS

What if I forget my passphrase?

It can't be recovered by anyone, which is what keeps your vault private. Choose something memorable, and keep an older copy of your vault as a backup.

Can I use it on my phone and my laptop?

Yes. Copy your .axon file to the other device and open it there. Carry one file forward at a time. The highest r-number is the newest.

Is the tone read always right?

No. It's a best guess from the words alone, so it shows its evidence and confidence. For anything important, you can always ask the person.

Does it work without internet?

Yes, once it has loaded once. Open your vault file (or your on-device copy) and read, search and explore your map. Only the AI parts need a connection.

Can I import my WhatsApp chats?

Yes. In WhatsApp choose Export chat → Without media, then import the file. Imported history stays in your vault and is never sent to an AI unless you open a message and ask.

GET STARTED

1 • Open the site

Choose "Start a new vault".

2 • Take the tour

A one-minute walk-through with an example message. Nothing to set up.

3 • Add your first message

Paste it in, then save your vault.
